

Recommendation of Zuzanna Stachlewska

With this letter I recommend Zuzanna Stachlewska for any engineering position within materials technology and materials research. During summer 2025 I had an open position for a materials research engineer with focus on failure analysis. I received an overwhelming 450 applications with many good candidates. Zuzanna was one of the three best candidates and I obtained a very good impression through two interviews and two tests (Talogy Logiks cognitive test and PAPI3+ personality test).

Zuzanna stands out to me as a very dedicated person with a structured approach to her work and a great attention to detail. She is a creative and innovative person with an excellent ability to communicate scientific results to various stakeholders – both verbally and in writing. She has hands-on experience with all the relevant techniques available in a well-equipped metallurgical laboratory – from initial steps of sample preparation to detailed studies in a scanning electron microscope.

Zuzanna appears eloquent and self-confident with very good self-awareness. She is hardworking, reflective and has an excellent ability to relate critically and constructively – both to the professional content and to her own practice.

Zuzanna has a catching personality that makes a great first impression. She is an open and social person who quickly creates good relationships around her. I see her as an employee who would fit well into any engineering team.

I hereby give Zuzanna my warmest recommendation and am happy to be available for further questions.

Med venlig hilsen

Jesper Vejlø Carstensen
